

## **SPEAKERS**

Dr. Douglas W. Lundy, MD, MBA, FAAOS St Luke's University Health Network FTR Steering Committee

Matthew Gitelis
Founder, CEO
PatientIQ

### **AGENDA**

### 1. St. Luke's: Leading the Future of Registry Participation

- Overview of the AAOS Fracture & Trauma Registry
- St. Luke's Challenges in Traditional Data Collection
- PatientIQ & St. Luke's Partnership

### 2. FTR Powered by PatientIQ: Transforming Data Collection

- Automating Data Collection with PatientIQ
- Smart Strategies to Boost Compliance

### 3. Registry Participation Impact: Results that Matter

- Value for Providers and Patients
- Future Vision for the FTR

#### 4. Questions & Answers

## FRACTURE & TRAUMA REGISTRY

#### Mission:

- The purpose of the FTR is to improve care and outcomes for patients with fractures and traumatic injuries through the collection, analysis, and dissemination of high-quality data.
- This registry aims to support best practices, enhance patient safety, and foster research into injury patterns, treatment outcomes, and quality improvement in orthopaedic trauma care.

### **Strategy:**

- We will improve orthopaedic trauma care quality by establishing a comprehensive, centralized record of injury, treatment, and outcome data.
- The FTR will serve as a research-grade resource for investigating injury patterns, procedural outcomes, risk factors, and functional recovery.
- FTR data will provide insights that support clinical decision-making and quality initiatives in trauma care, while facilitating maximum participation through streamlined data entry and integration with clinical workflows.

## FRACTURE & TRAUMA REGISTRY

### **ESTABLISHED IN 2021, PUBLIC LAUNCH IN 2022**

- 35+ sites actively contracted
- 19,000+ procedures

### **5 MODULES**

- Ankle Fracture
- Distal Femur Fracture
- Distal Radius Fracture
- Hip Fracture
- Proximal Humerus Fracture

### FTR STEERING COMMITTEE

### Michael J. Gardner, MD, FAAOS - Chair

Stanford University

Jaimo Ahn, MD, PhD, FAAOS

Emory University

Kyle J. Jeray, MD, FAAOS

• Prisma Health

Douglas W. Lundy, MD, MBA, FAAOS

• St. Luke's University Health Network

Saam Morshed, MD, PhD, MPH, FAAOS

University of California, San Francisco

William T. Obremskey, MD, MPH, FAAOS

Vanderbilt Ortho Institute

Steven A. Olson, MD, FAAOS

Duke Hospital

Heather A. Vallier, MD, FAAOS

Case Western Reserve University

### DATA COLLECTED BY THE FTR

#### **Patient**

- Name (Last, First)
- Date of Birth
- Social Security Number
- Diagnosis (ICD-10)
- Gender
- Race/Ethnicity
- Residential Setting
- Ambulatory Status
- Pre-operative Modified Frailty Index (MFI-5)
- Delirium Score

### Fracture and Trauma Details

- Fracture Type
- Fracture Group
- Fixation Type
- Fracture Status
- Fracture Stability
- Fracture Locationspecific Treatments
- Articular Impaction Details
- Injury Mechanism
- Injury to Reduction Time
- Injury to Surgery Time
- Anesthesia Type

#### **Procedure**

- Type (ICD-10, CPT)
- Date of Surgery
- Injury Data
- Regional Block
- Osteoporosis Screening
- Calcium/Vitamin D Supplementation
- Implants and Grafts

### Comorbidities and Complications

- Comorbidities (ICD-10)
- Height + Weight/Body Mass Index
- Length of Stay
- American Society of Anesthesiologists Score
- Charlson Comorbidity Index (CCI)
- Operative and Postoperative Complications
- COVID-19 as a prior diagnosis

### Patient-Reported Outcomes

- PROMIS-10 Global or VR-12
- PROMIS Physical Function
- Anatomic-specific
   PROMs for each module
- Also Accepted:
- PROMIS-29
- PROMIS Anxiety
- PROMIS Depression
- PROMIS Pain Interference
- PROMIS-CAT (only accepting summary scores)

### CLINICIAN-ENTERED ENHANCED DATA SUBMISSION

The overall quality, accuracy, and completeness of Registry data will be enhanced by capturing a broader array of advanced clinical information through clinician-entered elements.

### **Enriched Data Set**

Comprehensive and detailed datasets support more robust analyses, leading to better-informed decision-making, research outcomes, and quality improvement initiatives

### **Accuracy**

Clinician-entered data is often more accurate and reflective of the actual patient encounter. Clinicians can verify and validate the information they input, ensuring data accuracy and integrity.

### **Completeness**

Help fill gaps and ensure that all pertinent clinical details are documented in real-time, minimizing the risk of data gaps or omissions that could compromise the completeness of the dataset.

# **ENHANCED DATA ELEMENTS**

### ST. LUKE'S CHALLENGES

St. Luke's was motivated to participate in FTR, but experienced challenges with manual participation

IT burden to extract procedure and patient-reported outcome data

Manual workflows to extract, aggregate, format and submit data each month

Lack of structured data available in the EHR for registry-specific use cases

# PATIENTIQ INTRODUCTION

Healthcare software company that supports institutions in collecting and analyzing patient outcome data

The cloud-based PatientIQ platform translates patientprovided data into insights that support:

- Quality improvement
- Clinical research
- Regulatory reporting

Building the largest network of healthcare providers, researchers, and industry partners collaborating to improve patient outcomes

#### Fast facts:

- Founded in 2016
- Headquartered in Chicago, IL
- 9M+ patients enrolled
- 700+ healthcare organizations

# **OUTCOMES DATA COLLECTED ACROSS OUR NETWORK**

**700+**Healthcare Organizations

5,000+
Sites of Care

9M+ Patients Enrolled

1M+
PROMs Collected Monthly

# FTR POWERED BY PATIENTIQ

To reduce the burden on St. Luke's clinical and IT teams, PatientIQ:

- 1. Automates collection of all procedure and patient-reported outcomes data
- 2. Embeds forms in Epic to collect clinician-entered, advanced data
- 3. Aggregates and translates data to meet registry specifications
- 4. Submits data to AAOS monthly

## **AUTOMATED PATIENT ENROLLMENT**

St. Luke's patients are auto-enrolled into the appropriate FTR project when a visit is scheduled

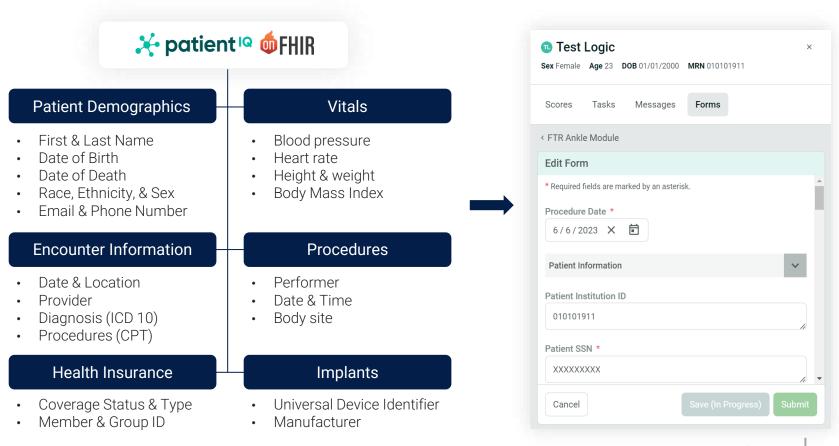

### **AUTOMATED PROCEDURE DATA COLLECTION**

FTR forms are embedded directly in Epic and auto-populated with all data required for submission

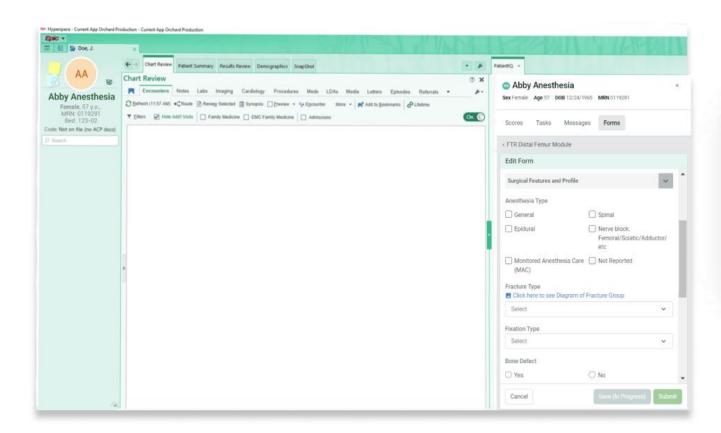

## **ENHANCED DATA COLLECTION**

### Forms Populated Directly in Epic

St. Luke's residents populate forms with enhanced data at the point of care, including:

- Fracture Type
- Fixation Type
- Surgical Approach

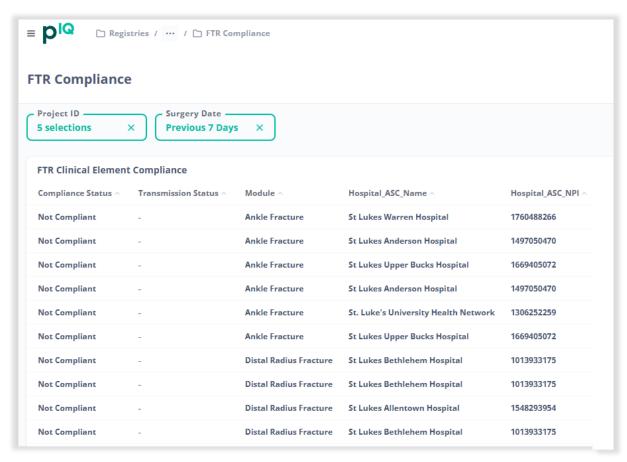

## REPORTING TO BOOST COMPLIANCE

### **Weekly Compliance Reports**

St. Luke's receives automated reports with a list of forms missing enhanced data.

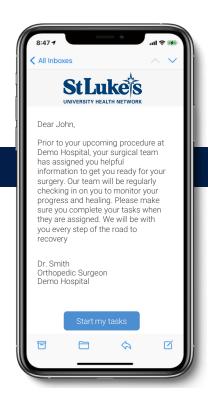

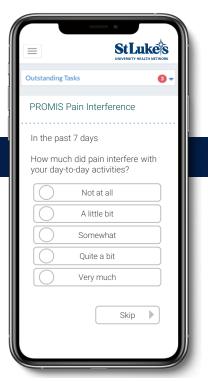

## **AUTOMATED PRO DATA COLLECTION**

Patients receive automated engagements to collect patient-reported outcomes data

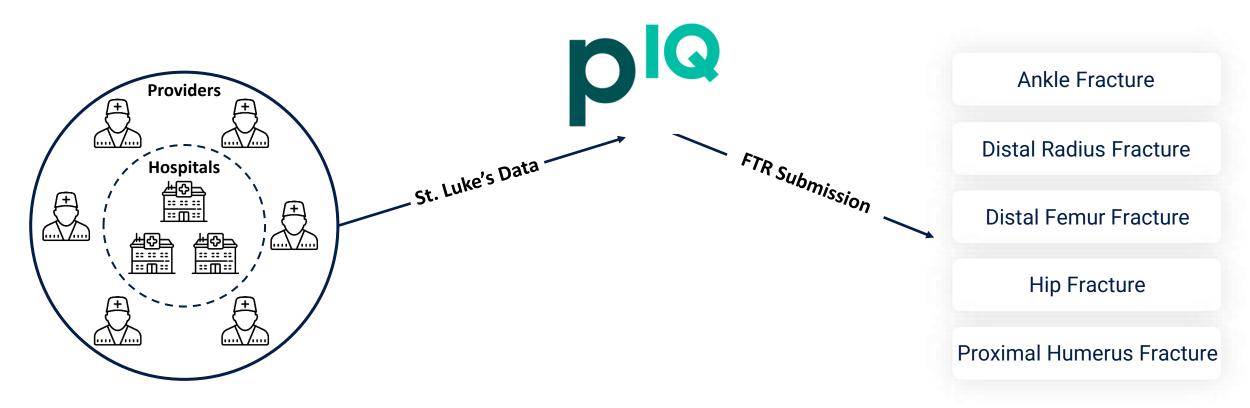

## **AUTOMATED SUBMISSION TO FTR**

PatientIQ aggregates, validates, formats and submits all St. Luke's data to FTR monthly

### WHY EARLY PARTICIPATION MATTERS

Early adoption allows you to shape the development and standards of the registry

Influences clinical guidelines and quality measures based on real-world data

Positions your site as a leader in orthopaedic trauma care and quality improvement

## BENEFITS OF EHR INTEGRATION AT ST. LUKE'S

#### **Automated Data Submission**

Simplified process reduce administrative burden for monthly data submissions.

#### **Point-of-Care Data Capture**

Integrated into workflow, taking less than 30 seconds to populate FTR forms with value-add data elements.

#### **No Additional Staffing Needed**

The EHR integrated approach fits seamlessly into current operations, alleviating the need for FTEs.

## Valuable Contribution to the Orthopaedic Community

Participation allows providers to advance trauma care standards while still focusing on patient-centered outcomes.

#### Streamlined Workflow

Allows providers to focus on patient care, not paperwork.

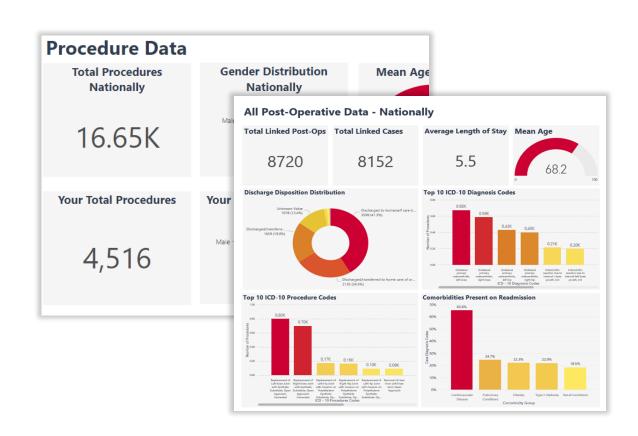

## **VALUE FOR OUR INSTITUTION**

- Drive Quality Improvement: Identify care gaps and improve safety protocols
- Benchmark Performance: Compare outcomes with national benchmarks
- Reputation as a Quality Leader: Participation highlights a commitment to excellence
- Prepare for Future Standards: Align with evolving quality verification requirements

## **VALUE FOR OUR SURGEONS**

- Support Clinical Decision-Making: Realtime data supports evidence-based care
- Professional Growth: Participation opens doors for research and quality initiatives
- Shape the Future: Influence orthopaedic trauma care standards by contributing data
- Commitment to Quality: Demonstrates dedication to continuous improvement

As part of its wide variety of data reuse initiatives, the AAOS Registry Program provides surgeons the opportunity to earn up to 10 self-assessment examination (SAE) credits for the American Board of Orthopaedic Surgery (ABOS) Maintenance of Certification (MOC) Part II.

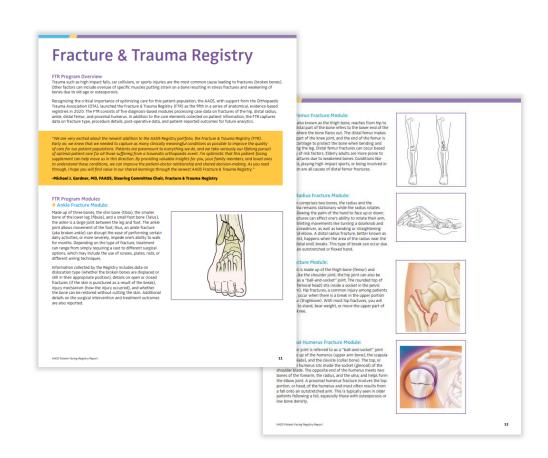

### **VALUE FOR OUR PATIENTS**

- Personalized Treatment Plans: Data helps tailor care based on real-world results
- Timely Interventions: Quicker response to complications based on data insights
- Clear Recovery Expectations: Patients receive better information on what to expect
- Evidence-Based Care: Ensures consistent, high-quality treatment for all patients

### **FUTURE VISION FOR THE FTR**

**Expanding Participation and Data Utilization** 

Becoming the Gold Standard for Orthopaedic Trauma Quality Improvement

Driving Evidence-Based Practice and Research

**Enhancing Patient-Centered Care** 

### **GETTING STARTED**

- Contact the AAOS Registry Engagement team (<u>registryengagement@aaos.org</u>)
- Schedule an introductory meeting with AAOS & PatientIQ
- Kick off implementation & EHR integration
- PatientIQ sets up platform and begins submitting data to FTR
